

OEKO-TEX® STANDARD 100

What is the OEKO-TEX® STANDARD 100?

The OEKO-TEX® STANDARD 100 is a worldwide, independent testing and certification system for raw, semi-finished, and finished textile products at all processing levels, as well as any accessory materials used.

**STANDARD
100**

**00.000.000
Hohenstein HTTI**

The test for harmful substances includes:

- Substances which are prohibited and regulated by law
- Chemicals that are known to be harmful to health but which are not regulated by law
- Substances that are believed to be harmful to health.

What do you get?

- A detailed report and an annual certificate as proof of the successful testing of your textile products for harmful substances.
- A label with which you can communicate the safety of your product to your customers and business partners and thus set yourself apart from the competition.
- The chance to save costs with the OEKO-TEX® modular system. Certificates for raw materials can be recognised at the subsequent production levels without necessarily requiring a repeat laboratory test.
- The chance to present your certified product range and your company in detail in the OEKO-TEX® Buying Guide (www.oeko-tex.com/en/buying-guide) without charge.

How is the STANDARD 100 integrated in the OEKO-TEX® system?

OEKO-TEX® STANDARD 100 is used for B2B communication within the value creation chain as well as B2C communication. Together with OEKO-TEX® STeP certification for environmentally friendly and socially responsible production facilities, STANDARD 100 forms the basis for granting the OEKO-TEX® MADE IN GREEN label.

Your route to certification
